

**BAG1115 Inactivated Pneumococcal Type 9N Antigen****DATA SHEET**

<b>Catalog Number</b>	BAG1115
<b>Product Name</b>	Inactivated Pneumococcal Type 9N Antigen
<b>Molecular Name</b>	Pneumococcal
<b>Size</b>	250µl, 1ml
<b>Species</b>	Bacteria
<b>Host</b>	Pneumococcal
<b>Purification</b>	IEC & HPLC
<b>Applications</b>	Immunogen, WB, ELISA
<b>Purity</b>	>95% as estimated by SEC-HPLC
<b>Buffer</b>	Powder or 0.1M PBS, PH 7.0
<b>Storage</b>	Store the lyophilized powder at 4°C for 6 months. It is recommended to aliquote to ~10ul per vial and store at -20°C for long term storage. Avoid repeated freezing and thawing cycles.
<b>Background</b>	In most cases, once pneumococcal pneumonia has been identified, doctors will prescribe antibiotics. These antibiotic usually help alleviate and eliminate symptoms between 12 and 36 hours after being taken. Despite most antibiotics' effectiveness in treating the disease, sometimes the bacteria can resist the antibiotics, causing symptoms to worsen. Additionally, age and health of the infected patient can contribute to the effectiveness of the antibiotics.
